(54) VECTOR DRAWING METHOD IN BROADCASTING DISPLAY SYSTEM

(57) Abstract:

The method provides a character coding method which to displays various characters having different sizes and shapes, by changing only one stored vector font for the character. The method comprises: an initialization step to read each vector font's XY coordinates from memory and to create transform matrice; a step to make rotating transform matrice for having input characters have three dimensional forms; a step to convert three dimensional modified characters into the two dimensions and display them.
